

Fact Sheet

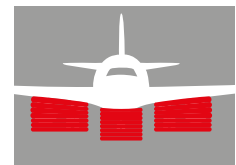

Intelligent Sensor Mat

Discover your new sense of recovery

Your next recovery will be much smoother with SefrinTec. SefrinTec's perfect interaction between the pressure-sensitive sensors on top of your lifting bags and the software enables you to control the pressure and to record the entire lifting operation.

Measuring the real pressure during bag lifting and transportation.

Bag Lifting

Transport

Save time by efficient lifting

The Intelligent Sensor Mat is the basis of the SefrinTec recovery system, measuring the real pressure between aircraft weight and the contacted surface. The mat is used to lift the aircraft with lifting bags and is also deployed in transporting an aircraft without landing gears.

- Increases safety thanks to a higher level of stability
- Prevents secondary damage
- Records the recovery operation
